biodiversity the genetic variety of life is an exuberant product of the evolutionary past a vast human supportive resource aesthetic intellectual and material of the present and a rich legacy to cherish and preserve for the future two urgent challenges and opportunities for 21st century science are to gain deeper insights into the evolutionary processes that foster biotic diversity and to translate that understanding into workable solutions for the regional and global crises that biodiversity currently faces a grasp of evolutionary principles and processes is important in other societal arenas as well such as education medicine sociology and other applied fields including agriculture pharmacology and biotechnology the ramifications of evolutionary thought also extend into learned realms traditionally reserved for philosophy and religion the central goal of the in the light of evolution ile series is to promote the evolutionary sciences through state of the art colloquia in the series of arthur m sackler colloquia sponsored by the national academy of sciences and their published proceedings each installment explores evolutionary perspectives on a particular biological topic that is scientifically intriguing but also has special relevance to contemporary societal issues or challenges this book is the outgrowth of the arthur m sackler colloquium cooperation and conflict which was sponsored by the national academy of sciences on january 7 8 2011 at the academy s arnold and mabel beckman center in irvine california it is the fifth in a series of colloquia under the general title in the light of evolution the current volume explores recent developments in the study of cooperation and conflict ranging from the level of the gene to societies and symbioses humans can be vicious but paradoxically we are also among nature s great cooperators even our great conflicts wars are

extremely cooperative endeavors on each side some of this cooperation is best understood culturally but we are also products of evolution with bodies brains and behaviors molded by natural selection how cooperation evolves has been one of the big questions in evolutionary biology and how it pays or does not pay is a great intellectual puzzle the puzzle of cooperation was the dominant theme of research in the early years of darwin s research whereas recent work has emphasized its importance and ubiquity far from being a rare trait shown by social insects and a few others cooperation is both widespread taxonomically and essential to life the depth of research on cooperation and conflict has increased greatly most notably in the direction of small organisms although most of in the light of evolution v cooperation and conflict is about the new topics that are being treated as part of social evolution such as genes microbes and medicine the old fundamental subjects still matter and remain the object of vigorous research the first four chapters revisit some of these standard arenas including social insects cooperatively breeding birds mutualisms and how to model social evolution

in the last decade evolutionary psychology has come to refer exclusively to research on human mentality and behavior motivated by a nativist interpretation of how evolution operates this book encompasses the behavior and mentality of nonhuman as well as human animals and a full range of evolutionary approaches rather than a collection by and for the like minded it is a debate about how evolutionary processes have shaped cognition the debate is divided into five sections orientations on the phylogenetic ecological and psychological comparative approaches to the evolution of cognition categorization on how various animals parse their environments how they represent objects and events and the relations among them causality on whether and in what ways nonhuman animals represent cause and effect relationships consciousness on whether it makes sense to talk about the evolution of consciousness and whether the phenomenon can be investigated empirically in nonhuman animals and culture on the cognitive requirements for nongenetic transmission of information and the evolutionary consequences of such cultural exchange contributorsbernard balleine patrick bateson michael j beran m e bitterman robert boyd nicola clayton juan delius anthony dickinson robin dunbar d p griffiths bernd heinrich cecilia heyес william a hillix ludwig huber nicholas humphrey masako jitsumori louis lefebvre nicholas mackintosh euan m macphail peter richerson duane m rumbaugh sara shettleworth martina siemann kim sterelny michael tomasello laura weiser alexandra wells carolyn wilczynski david sloan wilson
