economics has a problem the discipline cannot distinguish the causes of human action from the consequences of human action economists deal with matters of fact not with feelings and morals they model representations of optimal agents not flesh and blood human beings in ordinary life by assuming that incentives and self interest are sufficient to explain economic activity economic science proceeds as if the human mind does not matter but the origins of our actions ideas do indeed matter they make us human in meaningful economics bart j wilson challenges economics to directly engage human beings as we really are not as economists ideally assume wilson argues that economic science is as much about purposes and human values as it is about incentives moreover he shows how the

outcomes of our decisions costs and benefits and the origins of our decisions motives and goals can be understood in an integrated way over the course of the book wilson develops a framework that connects the origins of human action to the outcomes of human action explaining human conduct with causes and effects he then shows how three basic principles of economics trade specialization and property require meaning values and purpose with a fresh perspective and a novel theoretical framework that bridges economics and ethics meaningful economics explains the roots of human conduct and its economic effects by grounding a science of economics in the moral sentiments that prompt human beings to act
