Electoral Budgeting

Anne-Sofie Holm

UNDP - Procurement Support Office
Copenhagen, 29-31 October 2008
OBJECTIVE

• To understand the costs related to registration, the electoral event and the electoral cycle

• The ability to establish or review electoral budgets for procurement purposes

• Addressing one of the big challenges; To be able to identify when budgets are insufficient for procurement needs
THE ELECTORAL CYCLE

POST-ELECTORAL PERIOD
- POST ELECTION
- LEGAL FRAMEWORK
- PLANNING & IMPLEMENTATION
- CONSTITUTION
- LEGISLATION
- ELECTORAL SYSTEM & BOUNDARIES
- ELECTORAL BODIES
- CODES OF CONDUCT
- BUDGETING, FUNDING & FINANCING

PRE-ELECTORAL PERIOD
- CIVIC EDUCATION
- VOTER INFORMATION
- VOTER REGISTRATION
- CODES OF CONDUCT
- OBSERVER ACCREDITATION
- PARTIES & CANDIDATES
- MEDIA ACCESS
- PARTY FINANCING
- CAMPAIGN COORDINATION
- BREACHES & PENALTIES
- CODES OF CONDUCT
- ELECTORAL CAMPAIGN
- REGISTRATION & NOMINATIONS
- VOTING OPERATIONS & ELECTION DAY
- VOTING
- SPECIAL & EXTERNAL VOTING
- VOTE COUNTING
- TABULATION OF RESULTS
- COMPLAINTS & APPEALS
- OFFICIAL RESULTS
- Archiving & Research
- Audits & Evaluations
- Legal Reform
- Institutional Strengthening & Professional Development
- Voters’ Lists Update

Budgeting, Funding & Financing

THE ELECTORAL CYCLE
How to budget the costs...

Costs take several forms;

- Direct procurement cost
- Diffused cost
- Integrity cost (public trust)
- Core cost

So how do we budget for elections, and how much does an election cost?
Budget formulation: Two main approaches

Baseline budgeting
A budget proposal according to financial figures extracted from previous budgetary operations

Zero base budgeting
A budget proposal without reference to any previous exercises
Types of budgeting...

- Project focused budget
- Electoral event consolidated budget
  - A new approach in line with the electoral cycle approach
- Electoral cycle budget
Project & Electoral Event Budgeting

Project: Determining financial requirements according to project outputs and detailed activities:

• Top down approach
• Narrow focus on project outputs
• In isolation from the EMB financial structure
• Risk of duplication, overlaps and shortfalls

Event: Designing the budget according to the election’s financial requirements and aggregate the funding requirements for both EMB and projects into a consolidated budget, covering the electoral exercise:

• Bottom up approach,
• Project budget becomes complementary to the EMB’s one
• Identify financial gaps
• Assess the cost of the elections
Electoral Cycle Budgeting

- Look at the funding requirements from a long term perspective
- Assess the pre-election, election and post election requirements
- Help secure funding for the “low season” of the electoral cycle to address recommendations from post-election assessments and observer reports
- Put emphasis on capacity-building, legal reform, check-and-balance (accountability), inclusiveness …etc.
- Develop synergies with other support activities
- Estimate the likely funding allocation from Government to identify potential gaps and shortfalls
Where to begin...

• Establish a list of every activity and category of cost for election budgeting

• Establish an Election Budget Template, incl. a breakdown of election related costs with much more detail of the key line items that need to/could be bought for an election for discussion with EMBs

• Establish an Election Staffing Table – incl. the cleaners and maintenance people, linked to the overall budget template
Identifying ‘Running Costs’

Staff (salaries, allowances, bonus)
Temporary staff/labourers
Equipment
Offices (rent, maintenance, purchase, construction)
Supplies/Consumables
Utilities
Communications
IT equipment/software/website
Legal costs
Banking Costs
Sub contractor fees
Recruitment costs
Insurance and compensation (death and injury)
Translation
Official Hospitality
Conferences/Study Trips

Travel/Transportation Costs
Fuel for vehicles and generators
External Relations and Promotions
Training/Staff Development
Warehouse costs
Security costs
Printed Materials
Public Outreach
Pilot studies
Small grants
Work with Media
Work with Observers
Work with Political Parties
Work with Civic Education groups
Generators
Uniforms
Identifying ‘Voter Registration Costs’

- Public Outreach (Design & Produce VE material, public service announcements – radio, tv, press - Call Center, Website etc.)
- Accreditation of Observers & Media
- Creation of VR lists
- Data Entry of VR lists
- Prepare VR Centers/Buildings
- Additional admin and finance costs

- VR staffing
- VR Training
- VR material development and distribution
- Display Period
- Security
Identifying ‘Polling Costs’

- Public Outreach
- Accreditation of observers and media
- Media Monitoring
- Training
- Polling Staff
- Party/Candidate Registration
- Ballot Lottery
- Production of ballot paper
- Preparation of Voter List
- Preparation of polling materials
- Polling Centre preparation
- Security (Polling Centres, District centres, offices, etc)
- Transport of Polling Materials to Polling Centres
- Set up JEOC
- Election Day (s)
- Retrieval of polling materials to GEOs
- Complaints mechanism

- Training of Counting/Tally staff
- Counting Centres
- Data Entry at Tally Centres
- Media Centre
- Retrieval of materials from DEO to HQ
- Destruction of materials
- Closure of offices/Long term storage of material
- Analysis of Candidate financial disclosure details
- Additional admin and finance costs

Option 1 uses a field team to complete, on behalf of a potential Voter, a paper registration application. A simple Voter’s ID card with a photo is issued to the potential Voter. The paper applications are forwarded to a central location for data entry into a database. However the photo is not available in the actual voters’ list.

**Advantages:**
- Low cost. It is a simple low-tech solution and well-tested. The risk of malfunctioning equipment is minimized.

**Disadvantage:**
- High degree of error since data needs to be manually type into a database. Labour intensive. Allows little possibility of checking for duplication. The photo is not available in the actual voters’ list. Updating and adding new records, as well as keep track of amended and deleted records are more cumbersome.

Option 2 uses OMR-technology. This is a semi-digital method. Forms are filled at the registration centre. An ID card with a photo will be issued to the voter. The forms will be scanned and consolidated centrally to build the voter registry/database with photo. A software to link between the OMR scanning environment and the database application will be required if biometric method is combined into the digital method, a fingerprint scanner (cost USD 450 each) will be required together with a validation test to check for duplications.

**Advantages:**
- Data are collected and verified by the potential voter on the spot, minimises margin of errors. It is less labour intensive as oppose to the low-tech method. Once the forms are scanned, the voter registry can be validated to check for duplications (if finger prints are included). A central data centre will have to be equipped with scanners, servers, workstations and associated software. It also allows easier means for updating and adding new records, as well as keeps track of amended and deleted records. Less expensive as opposed to the fully digital method.

**Disadvantage:**
- Errors in filling/shading out the OMR forms and at the scanning phase and failure to integrate the OMR scanning environment with the database application.

Option 3 is a fully digital registration method. Voter data are captured digitally on the spot at the registration centre. An ID card with a photo is issued to the voter. The data collected will be consolidated centrally to build the voter registry/database with photo. The central data centre will be equipped with servers and workstations. If biometric method is combined into the digital method, a fingerprint scanner (cost USD 450 each) will be required together with a validation test to check for duplications.

**Advantages:**
- Data are collected digitally and verified by the potential voter on the spot minimises margin of errors. It also allows easier means for updating and adding new records, as well as keep track of amended and deleted records. Once the data are consolidated, the voter registry can be validated to check for duplications (if finger prints are included).

**Disadvantage:**
- The equipment can malfunction and software can be corrupted. There could be no paper trace to revert to at a later stage. High cost.

**UNDP - Procurement Support Office**  
Copenhagen, 29-31 October 2008
UNDP Procurement Example 1

Formulation of the Support to the 2008-2011 Strategic Plan of the National Election Commission in Rwanda

2008 Total Budget: US$ 19 million equal to 34% of overall 2008-2011 budget

Procurement related activities: US$ 11.7 equal to 61% of total 2008 expenditure

(here of 36% for procurement of electoral material and logistics, adding up with tendering for training, civic education, EMB core running costs such as comms services, stationary, maintenance, car rental etc.)

UNDP - Procurement Support Office
Copenhagen, 29-31 October 2008
Procurement Example 2

Formulation of the Support to the Zambian Electoral Cycle 2008-2011

Total Budget: US$ 17 million

Currently allocated procurement activities: US$ 8 million equal to 47% of total expenditure

(these 47% covers only procurement of civic & voter registration material, IT equipment, and contracts for various services but excluding E-Day material and logistics, hiring of international and national experts, EMB core running costs etc.)

UNDP - Procurement Support Office
Copenhagen, 29-31 October 2008
Challenges to electoral cycle budgeting

- Assess financial needs against specific outputs / activities
- Work on accurate assumptions
- Visualize scenarios
- Raise funds when there is no election on the agenda
- Address long-term ‘Capacity Building’ with recipient institutions
- Government financial commitments
- Donor fatigue
Thank You
